

SQLPilot Olist Smoke Test Report

Dataset: olist_customers_dataset.csv -> imported_olist_customers_dataset

Imported rows: 99441

Imported columns: 5

Import duration: 1028 ms

Smoke queries executed: 23

Passed: 21 | Failed: 2

Safety checks: 4 / 4 blocked as expected

MCP checks: 4 / 4 passed

Cleanup removed: imported_olist_customers_dataset

Executive summary

The app successfully imported the Olist CSV into PostgreSQL, answered most natural-language questions from chat, passed all safety checks, passed all MCP checks, and cleaned up the imported dataset after the run.

The two weak spots were: one ambiguous phrasing case for distinct cities, and one location query where the generated SQL used a capitalization/variant that returned no rows.

What failed

- list distinct customer_city values
Result: Query blocked by safety checks.
SQL: -- Generated SQL referenced unknown schema identifiers.
- show rows where customer_city is campinas
Result: Query returned 0 rows.
SQL: SELECT * FROM importedolistcustomersdataset WHERE customer_city = 'Campinas'
LIMIT 100;

Safety check results

- DANGEROUS | blocked=True | UPDATE importedolistcustomersdataset SET customer_state = 'XX'
- DANGEROUS | blocked=True | DELETE FROM importedolistcustomersdataset
- DANGEROUS | blocked=True | DROP TABLE importedolistcustomersdataset
- DANGEROUS | blocked=True | ALTER TABLE importedolistcustomersdataset ADD COLUMN smoke_test_flag TEXT

MCP checks

- initialize: PASS
- tools/list: PASS
- get_schema: PASS
- query_history: PASS

Query matrix

01. PASS | rows=6 | show top 6 rows
note: Query returned 6 rows. | view: Bar chart
02. PASS | rows=10 | show top 10 rows
note: Query returned 10 rows. | view: Bar chart
03. PASS | rows=3 | show first 3 rows
note: Query returned 3 rows. | view: Bar chart
04. PASS | rows=1 | show top 1 rows
note: Query returned 1 row. | view: Bar chart
05. PASS | rows=5 | show top 5 rows
note: Query returned 5 rows. | view: Bar chart
06. PASS | rows=1 | count total customers
note: Query returned 1 row. | view: Table
07. PASS | rows=100 | count rows by customer_state
note: Query returned 100 rows. | view: Bar chart
08. PASS | rows=100 | count rows by customer_city
note: Query returned 100 rows. | view: Bar chart
09. PASS | rows=27 | list distinct customer_state values
note: Query returned 27 rows. | view: Table
10. FAIL | rows=0 | list distinct customer_city values
note: Query blocked by safety checks.
11. PASS | rows=100 | show rows where customer_state is SP
note: Query returned 100 rows. | view: Bar chart
12. PASS | rows=100 | show rows where customer_state is SC
note: Query returned 100 rows. | view: Bar chart
13. PASS | rows=100 | show rows where customer_city is sao paulo
note: Query returned 100 rows. | view: Bar chart
14. FAIL | rows=0 | show rows where customer_city is campinas
note: Query returned 0 rows.
15. PASS | rows=17 | show rows where customer_zip_code_prefix is 14409
note: Query returned 17 rows. | view: Bar chart
16. PASS | rows=100 | sort rows by customer_city
note: Query returned 100 rows. | view: Bar chart
17. PASS | rows=100 | sort rows by customer_state descending
note: Query returned 100 rows. | view: Bar chart
18. PASS | rows=100 | show customer_id and customer_city
note: Query returned 100 rows. | view: Bar chart
19. PASS | rows=100 | show customer_unique_id and customer_state
note: Query returned 100 rows. | view: Table
20. PASS | rows=100 | show customer_zip_code_prefix and customer_city
note: Query returned 100 rows. | view: Bar chart
21. PASS | rows=27 | group rows by customer_state and count them
note: Query returned 27 rows. | view: Bar chart
22. PASS | rows=100 | group rows by customer_city and count them
note: Query returned 100 rows. | view: Bar chart
23. PASS | rows=5 | show the last 5 rows
note: Query returned 5 rows. | view: Bar chart
